VNI West

FAST FACTS

The VNI West transmission easement is expected to be around 70-metres-wide along most of the route, though this may vary during route refinement.

The easement is a legal right-of-way that allows for the safe planning, construction, and maintenance of the VNI West towers and lines.

Easements

What is an easement?

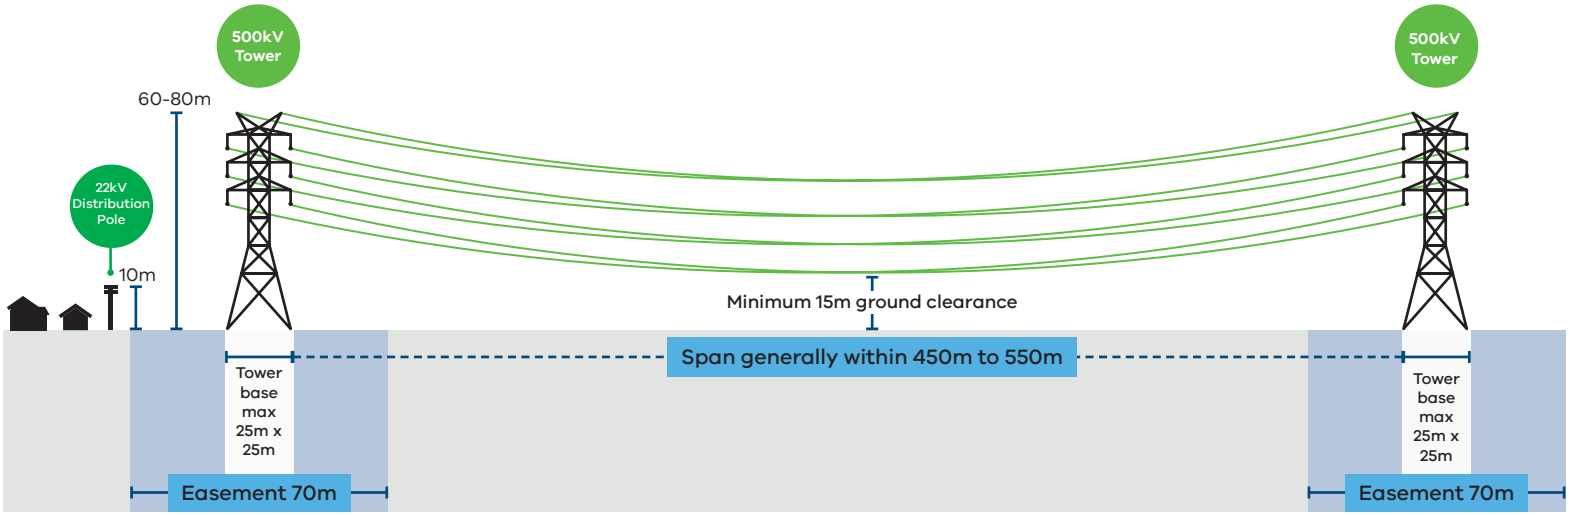

- Granting an easement is not the same as selling a part of your property — you still own the land. An easement is a legal right that allows VicGrid to access and use part of the land to build infrastructure.
- The land remains yours to use per the easement conditions; the easement will not be fenced off after construction.
- Most farming activities can continue, including cropping, grazing, and the use of machinery up to about 5 metres in height.
- Some farming activities will require a safety assessment, such as the use of machinery between 5 metres and 8.6 metres high.
- Your Landholder Liaison will work with you to identify suitable locations for transmission infrastructure to help minimise impacts on your property.
- Landholder Liaisons can also provide more specific advice and answer questions about farming across the easement and around the towers.

Where can I find more information?

The Landholder Guide provides a comprehensive overview of key issues associated with an easement, including: compensation and payments, land access, agreements, and biosecurity.
